

# Target Market Determination Life Insurance

## *Elevate Insurance*

Elevate Insurance (Elevate) consists of several separate financial products referred to as plans. The Target Market Determination (TMD) is specific to the plan, referred to as the product in this document. References to consumer in the TMD refer to the policy owner. In many cases the policy owner is the same person as the insured person, but a policy owner can apply to take out insurance on a different person. Where the information is specific to the 'insured person', the term insured person will be used.

<b>Product</b>	The TMD applies to the Life Insurance plan
<b>Issuer</b>	Resolution Life Australasia Limited ABN 84 079 300 379 (Resolution Life) is the issuer of the TMD

Change each year on the plan extension date according to the age of the insured person. Generally, premiums increase as the insured person gets older.</li> </ul> <p>A variable age-stepped premium structure is suitable for consumers who prefer a lower starting cost or are uncertain of how long their cover will be held. A variable age-stepped premium structure is not suitable for consumers who do not have the financial capacity to meet increasing premiums over time as a stepped premium structure will usually increase each year as the consumer gets older.</p>

## Product description and key attributes (continued)

- **Variable premiums** (formerly 'Level premiums').

Variable premiums don't increase each year as the insured person gets older and generally stay the same for each layer of cover during the term of your plan. However, they may increase and are not guaranteed to stay the same as when your policy commenced. For example, Variable premiums will increase if you increase the sum insured or you've selected automatic inflation increases for your plan or if we review the premium rates for your product as a whole. A layer of cover is made up of your initial sum insured and additional layers are made up of any increases in sum insured you apply for or increases due to plus any automatic inflation. Variable premiums change to Variable age-stepped premiums from the first extension date after the insured person turns 70 (or earlier if nominated).

A variable premium structure is suitable for consumers who are comfortable with higher starting costs and those that consider that they will hold cover for a longer term as they will benefit from the cost that is averaged over time. This premium structure is not suitable for consumers who may consider early policy termination due to the cover attracting higher starting costs.

Premiums (and any applicable fees or government charges) can change, regardless of the premium type. If Resolution Life review base premium rates, any change in the base premium rate will apply to all plans of the same type.
